March 2017

### HECAT Ratchets Up the Pulse Energy

HECAT's New Pulse Valve Design (2016 Patent) has been incorporated into the Base Model and Heavy Duty Versions of the **FAC-400** A/C Component Flusher and the **MARK IV** Transmission Oil Cooler Flusher; producing a 30% increase in Pulse Energy.

“The High Frequency Pulse Process used in all PULSATOR® Products has always produced much more scrubbing and cleaning energy than other flushing options; energy necessary to clean the complex micro and parallel pathways of today's high efficiency heat exchanger. It is exciting to see that the efforts to continuously improve have produced such an impressive result; which is great for our customers, and will further distance and differentiate HECAT from the competition in this space”, said Karl Matis, President at HECAT, Inc.

HECAT, Inc. is a manufacturer of specialty internal heat exchanger flushing and cleaning equipment, tools, adapters, chemicals, and procedures for automotive, aviation, fleet, and industrial services. HECAT® PULSATOR® products are designed to be an integral part of any proper air conditioning, automatic transmission, engine cooling, and system decontamination, reconditioning, and repair process.
